

Exponential Family (62.362 Kapwin)

Desopievou evis perpou y, a exponential family opifera Baser rus

p(x/y) = h(x) exp { y T(x) - A(y) }

Les cumulant

Sufficient statistic

• Poisson:
$$p(x|y) = \frac{y^{\times} \cdot e^{-y}}{x!} = \frac{1}{x!} \exp\left(\ln\left(y^{\times} - e^{-y}\right)\right) = \frac{1}{x!}$$

=
$$\frac{1}{x!} \exp(x \cdot lu \mu - \mu)$$
, onore $h(x) = \frac{1}{x!}$, $T(x) = x$ rear $A(\eta) = \mu$, $y = lu \mu$, $\Rightarrow \mu = e^{\eta}$

OTTO THE EXECUTE AUTH POLIVEZAN OWS IN link function

· Binouial:
$$p(x|p) = {n \choose x} p^{x} (1-p)^{n-x}$$
, ya 6 zasepò n

=
$$\binom{n}{x} \exp \left(\ln \left(p^{x} (1-p)^{n-x} \right) \right) = \binom{n}{x} \cdot \exp \left(x \cdot lup + (n-x) \ln (1-p) \right)$$

= $\binom{n}{x} \cdot \exp \left(x \cdot \left(lup - lu(1-p) \right) + n \cdot lu(1-p) \right) = \binom{n}{x} \exp \left[x \cdot lu \cdot \frac{p}{p-p} + n \cdot lu(1-p) \right]$
